

TANK PARK GULF - NIGTEVECHT (NETHERLANDS)

According to Dutch regulations and legislation, the company GULF was required to install a bottom protection layer in an existing tank pit. At a location of 10.000 m² with 10 tanks Trisoplast® was installed against the tanks and the surrounding concrete wall. GULF chose Trisoplast for its easy way of installation and the fact that the construction may be done in fases. An extra advantage was that connections around and against constructions were very easy and fast to make.

Project details

Principal	: Kosterman Milieutechniek
Contractor	: Demarol Zwanenberg
Quality control	: Fugro Arnhem
Year of installation	: 2005
Quantity	: 1.200 tons of Trisoplast
Surface covered	: 10.000 m ²
Layer thickness	: 7 cm
Construction	: Gravel on horizontal parts (30 cm) Ground on slopes (35 cm) Geo-textile Trisoplast (7 cm) Subgrade

Easy to handle, even on steep slopes
